ROYAL PARQUET

About us

Sourced from Europe,
Finished in the UAE

CERTIFIED ISO 9001:2015 COMPANY

Royal Parquet makes beautifully crafted and exquisitely finished engineered wood floors that are accessible to clients across the Middle East and beyond. The finest quality engineered wood flooring is sourced from Eastern Europe and Malaysia and finished locally in the UAE.

Royal Parquet uses Bona Industrial Coatings from Sweden, of which premium-grade stains and lacquers are applied using cutting edge technology. The result is an exceptional collection of engineered wood flooring products that honour the beauty of natural wood and offer enjoyment for many years to come.

Customised engineered wood floors - unlike anything ever seen before!

Introducing

EVOLVE

by Royal Parquet

Royal Parquet, the largest wood flooring brand in the Middle East, is proud to showcase its new range under the aptly named, Evolve, which now offers you a "greener" choice when choosing your wood flooring.

Evolve is the most versatile engineered wood flooring collection on the market. Whether you're looking to remodel your space completely or simply upgrade to something more luxurious, Evolve is the right move for you, and for the planet.

With our focus on sustainability and the global impact of carbon emissions, we have evolved to support this global effort by sourcing and distributing wood from sustainable forests. — In the post-Pandemic era, a severe shortage of raw materials has become evident. There is great difficulty in sourcing high-grade hardwood lumber, and when such lumber is discovered, the prices are usually very high. For this reason, Royal Parquet has chosen to absorb some of the costs by using an engineered process to produce more flooring from the same amount of hardwood resources.

We have also maintained the strength and resistance of the wood by applying top-quality lacquer from Bona Industrial Coatings to ensure longevity of your hardwood floor.

Bernera Supreme

Choosing The Right Colour

Colour shapes the mood of a space. Do you want an atmosphere of blissful relaxation? Or invigorating energy? With the right floor colour, anything is possible. Choose from one of our 40 stunning colours – or contact us about crafting you own from scratch.

ULTRA MATT FINISH COLOURS

The Ultra Matt finish is clean and timeless. It has a minimal level of sheen, providing a finish that is subtle and sophisticated, and requires very little maintenance to retain its appearance.

Choosing The Right Grading

Evolve by Royal Parquet offers two distinct grades of hardwood flooring: Supreme and Classic. This allows you to hone your search to your preferred aesthetics and pricing structure. When wood is graded, several criteria are considered—including the volume and size of natural wood knots, the amount of sapwood present, and the uniformity of the wood's texture and tone, among other factors.

The wood grades have been selected to complement the plank construction type and sizes, so not every plank is available in all grades.

Supreme

Supreme is the highest grade of wood flooring. It is also often described as AB-high grade. Cut from the centre of the log, this grade of wood is uniform in its appearance and has very few knots. If this quality of wood grade does contain knots, they tend to be small and unobtrusive.

Furthermore the sap content of this wood is very low. Finally, and often one of the most important considerations for people choosing a wood grade, the colour variation is minimal, but still there, due to the fact that wood is a natural product. A Supreme grade floor will have a very uniformed look.

Classic

Classic Grade wooden flooring is cut from the centre of the log. Each plank is chosen for subtle and refined figuring, with consistent texture and minimal colour variation providing a uniform look and feel. The premium cut means that knots and sap – which occur where branches meet the trunk – are kept to an absolute minimum.

Any knots present are small and inconspicuous, with tiny amounts of filler carefully applied to match the tone of the wood. Classic Grade flooring is perfect for those who want to invest in evenly toned and textured parquet wood floor.

Jura Compact

Customise the natural beauty of this wood

Jura Compact was specially designed to make it possible for you to install hardwood floors that are high quality, at a low cost. Owing it to its High-Density Fibreboard (HDF) core, Jura Compact floors hold up better against moisture, making your floors less likely to expand or contract with water damage or changes in humidity.

Manufactured using a classic, clean grade of European Oak wood, Jura Compact's top layer is made of beautiful natural hardwood, and the bottom layer is made of softwood; all compressed together to make a strong and solid flooring option. Jura Compact also offers you a "uni-click" installation mechanism, providing you with an easier and faster way to lay your flooring. Moreover, after consistent testing, Jura Compact scores high on performance, durability and, of course, affordability.

Jura Compact floors are fully customisable, they come in different styles and designs. Make your selection from a range of single planks or herringbone parquetry and mix and match from all 40 colours in the Royal Parquet palette to create your unique flooring design.

Advantages Jura Compact offers you: —

Low Maintenance
Owing to Jura Compact's high durability, it does not require constant repairs and attention. It makes for easy living and freedom from the burden of care required with other hardwood flooring.

Cost-effective & Environmentally Friendly
The High-Density Fibreboard core provides a stronger and more durable solution, making it cost-effective as well as a more eco-friendly solution for your hardwood flooring. The HDF core provides a stronger and more durable solution.

Easy Installation
Through a "uni-click" installation mechanism, installing Jura Compact flooring becomes easy and simple. No more hassles.

High Performance
Controlled and consistent testing have resulted in Jura Compact scoring high with regard to performance compared to other wood types.

THE CONSTRUCTION OF JURA COMPACT

Top Coat
The top coat is a lacquer, applied in either matt or gloss finish.

Top Layer
The veneer is made from solid hardwood 1.2mm thick, using a beautiful and durable European Oak.

Middle Layer
The core is constructed from high quality HDF which adds strength and stability to the floor.

Bottom Layer
The base layer is fixed to the HDF core which is made from softwood and gives additional stability along the full length plank.

Construction:	4 Layer Constructions
Dimension	127mm x 910mm x 12mm - Herringbone 127mm x 400-1200mm x 9mm - Plank
Top Layer	1.2 mm
Bavel	4-sides micro bevel
Grade	Classic
Resandable	1 time
Joint System	Click
Waterproof	No
Installation Method	Floating or Glue Down
Application	Commercial and Residential

Boa Hybrid

Make a splash with Boa Hybrid

A truly revolutionary concept, and one that no other wood provides. Boa Hybrid brings the best of both worlds, giving you the beauty of a real wood floor coupled with the water-resistant properties of a vinyl floor.

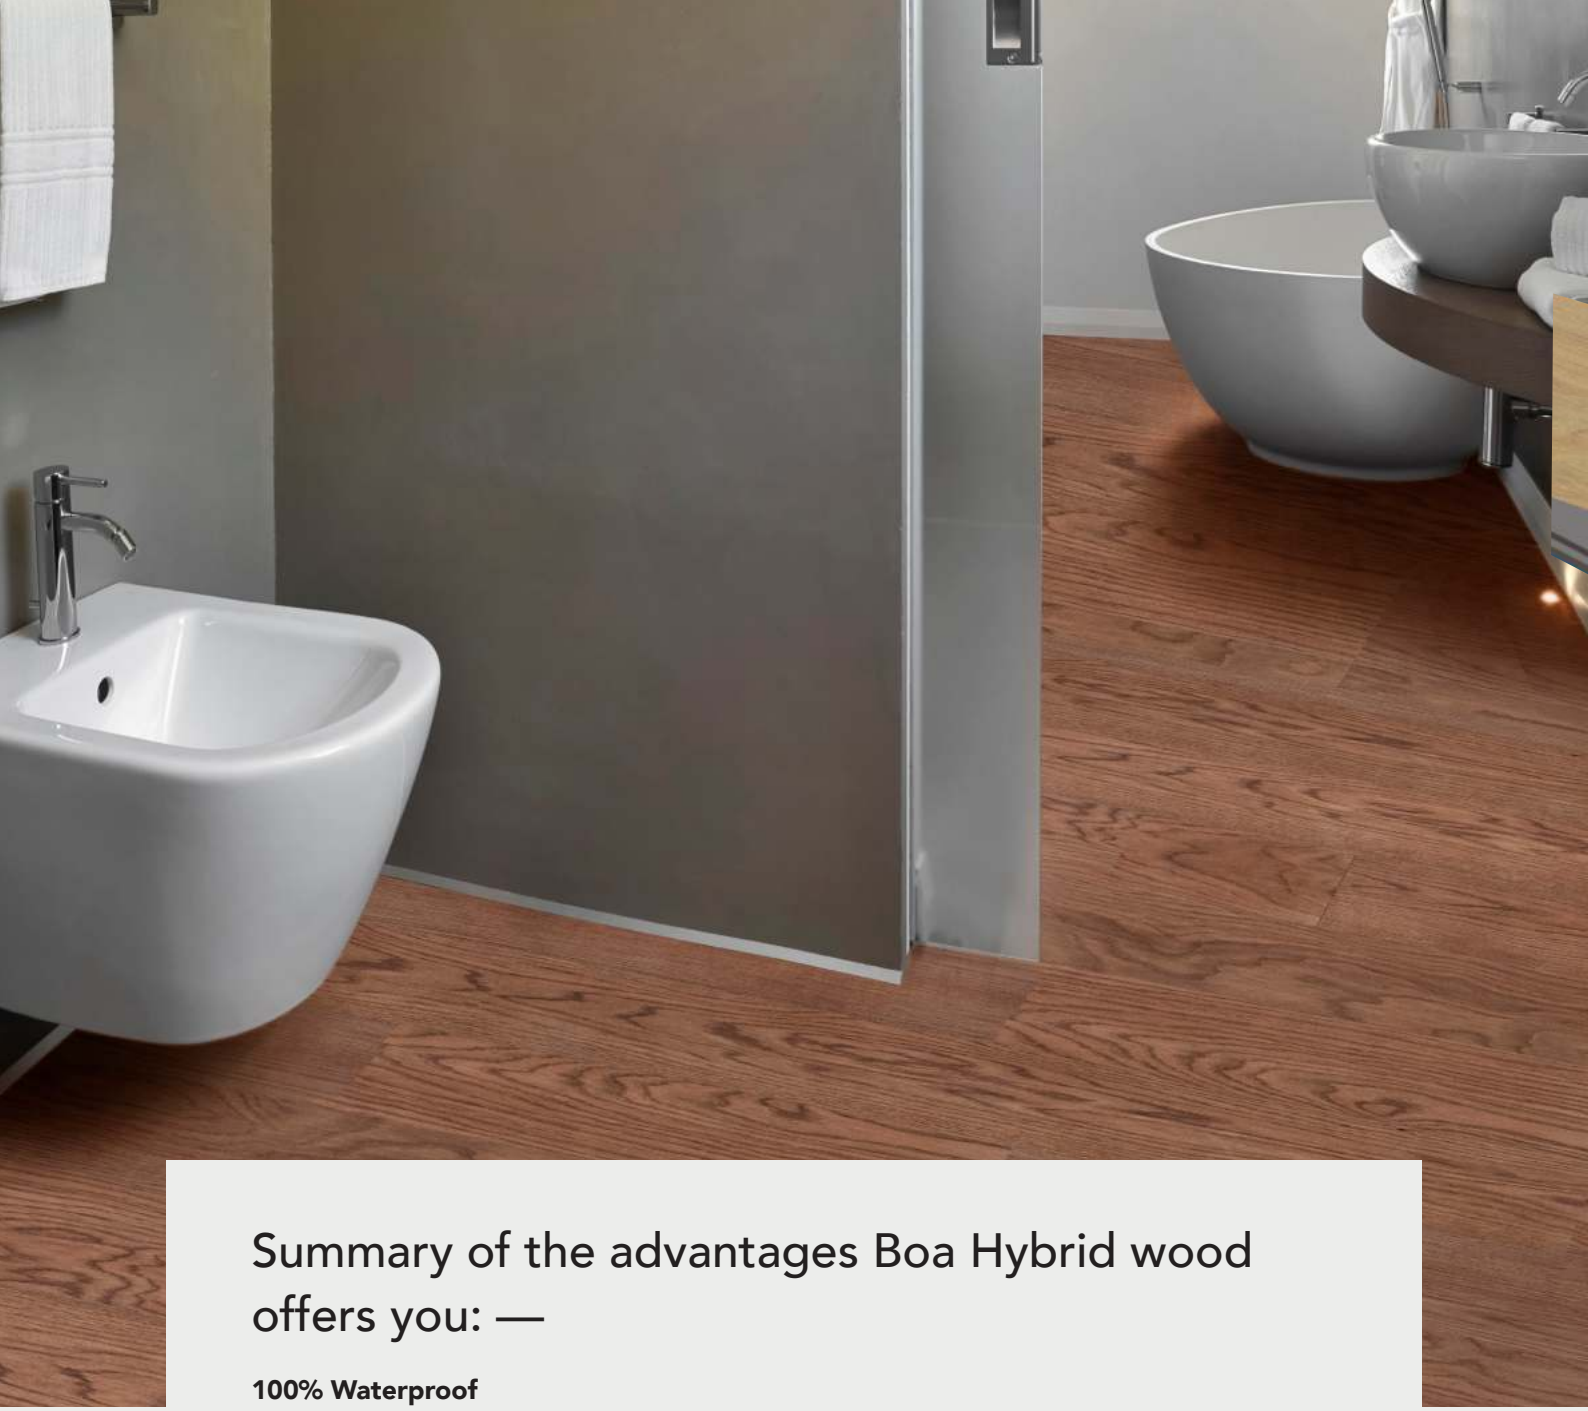
Boa Hybrid will give your bathroom and kitchen the natural look, feel, sound, and charm of real wood, but with 100% protection from water spills and major leaks, so you don't have to worry about damaging your floor.

Boa hybrid floors have been tested to withstand humidity and changes in temperatures to ensure they won't warp or crack. This makes them the ideal flooring solution for homes and businesses in the Middle East. You won't find wood floors like these anywhere else in the region.

The rigid core is the highlight of this Hybrid wood product because it offers the strength needed at an affordable price. More than this, this floor is made from a strong mixture of limestone and PVC that not only resists water and the damage it may cause but acts as a protective layer against wood mites and even bacteria.

The way you want it.

This environmentally friendly flooring is made from a supreme, clean-grade American Oak to give you that luxurious, smooth finish. Take your pick from a range of two plank widths and lengths, which includes an added option: classic herringbone design! Choose from our incredible range of colours to design a floor that will match your aesthetics and enhance your space. Say goodbye to water and moisture issues and hello to superior strength, beauty, and durability!



Summary of the advantages Boa Hybrid wood offers you: —

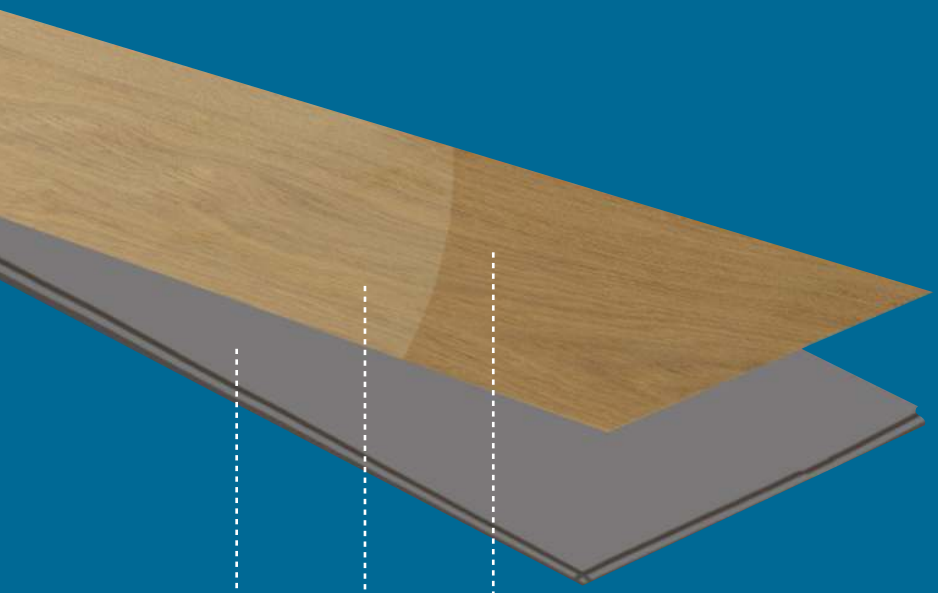
100% Waterproof
Nothing beats "waterproof". Spills are a thing of the past, and this wood truly fits the old adage that there is no longer a need to "cry over spilt milk"—because with Boa Hybrid, it won't sink in or cause warping; in fact, you can use this flooring in your bathroom!

Heat-resistant
This is the wood type for homes in the Middle East. With scorching temperatures, wood can react by shrinking, and in wet regions, wood swells. Not with Boa Hybrid. The core's mixture of limestone and PVC as well as a veneer of hardwood ensures no variation against your wood, no matter the environment.

Strength, Beauty & Luxurious Feel
The rigid core of Boa Hybrid wood provides the strength of vinyl flooring while maintaining the look and feel of natural wood.

Easy Installation
With a come-ready 5-G locking system, installation is simpler than ever, saving you time and frustration that other wood flooring often involves.

THE CONSTRUCTION OF BOA HYBRID

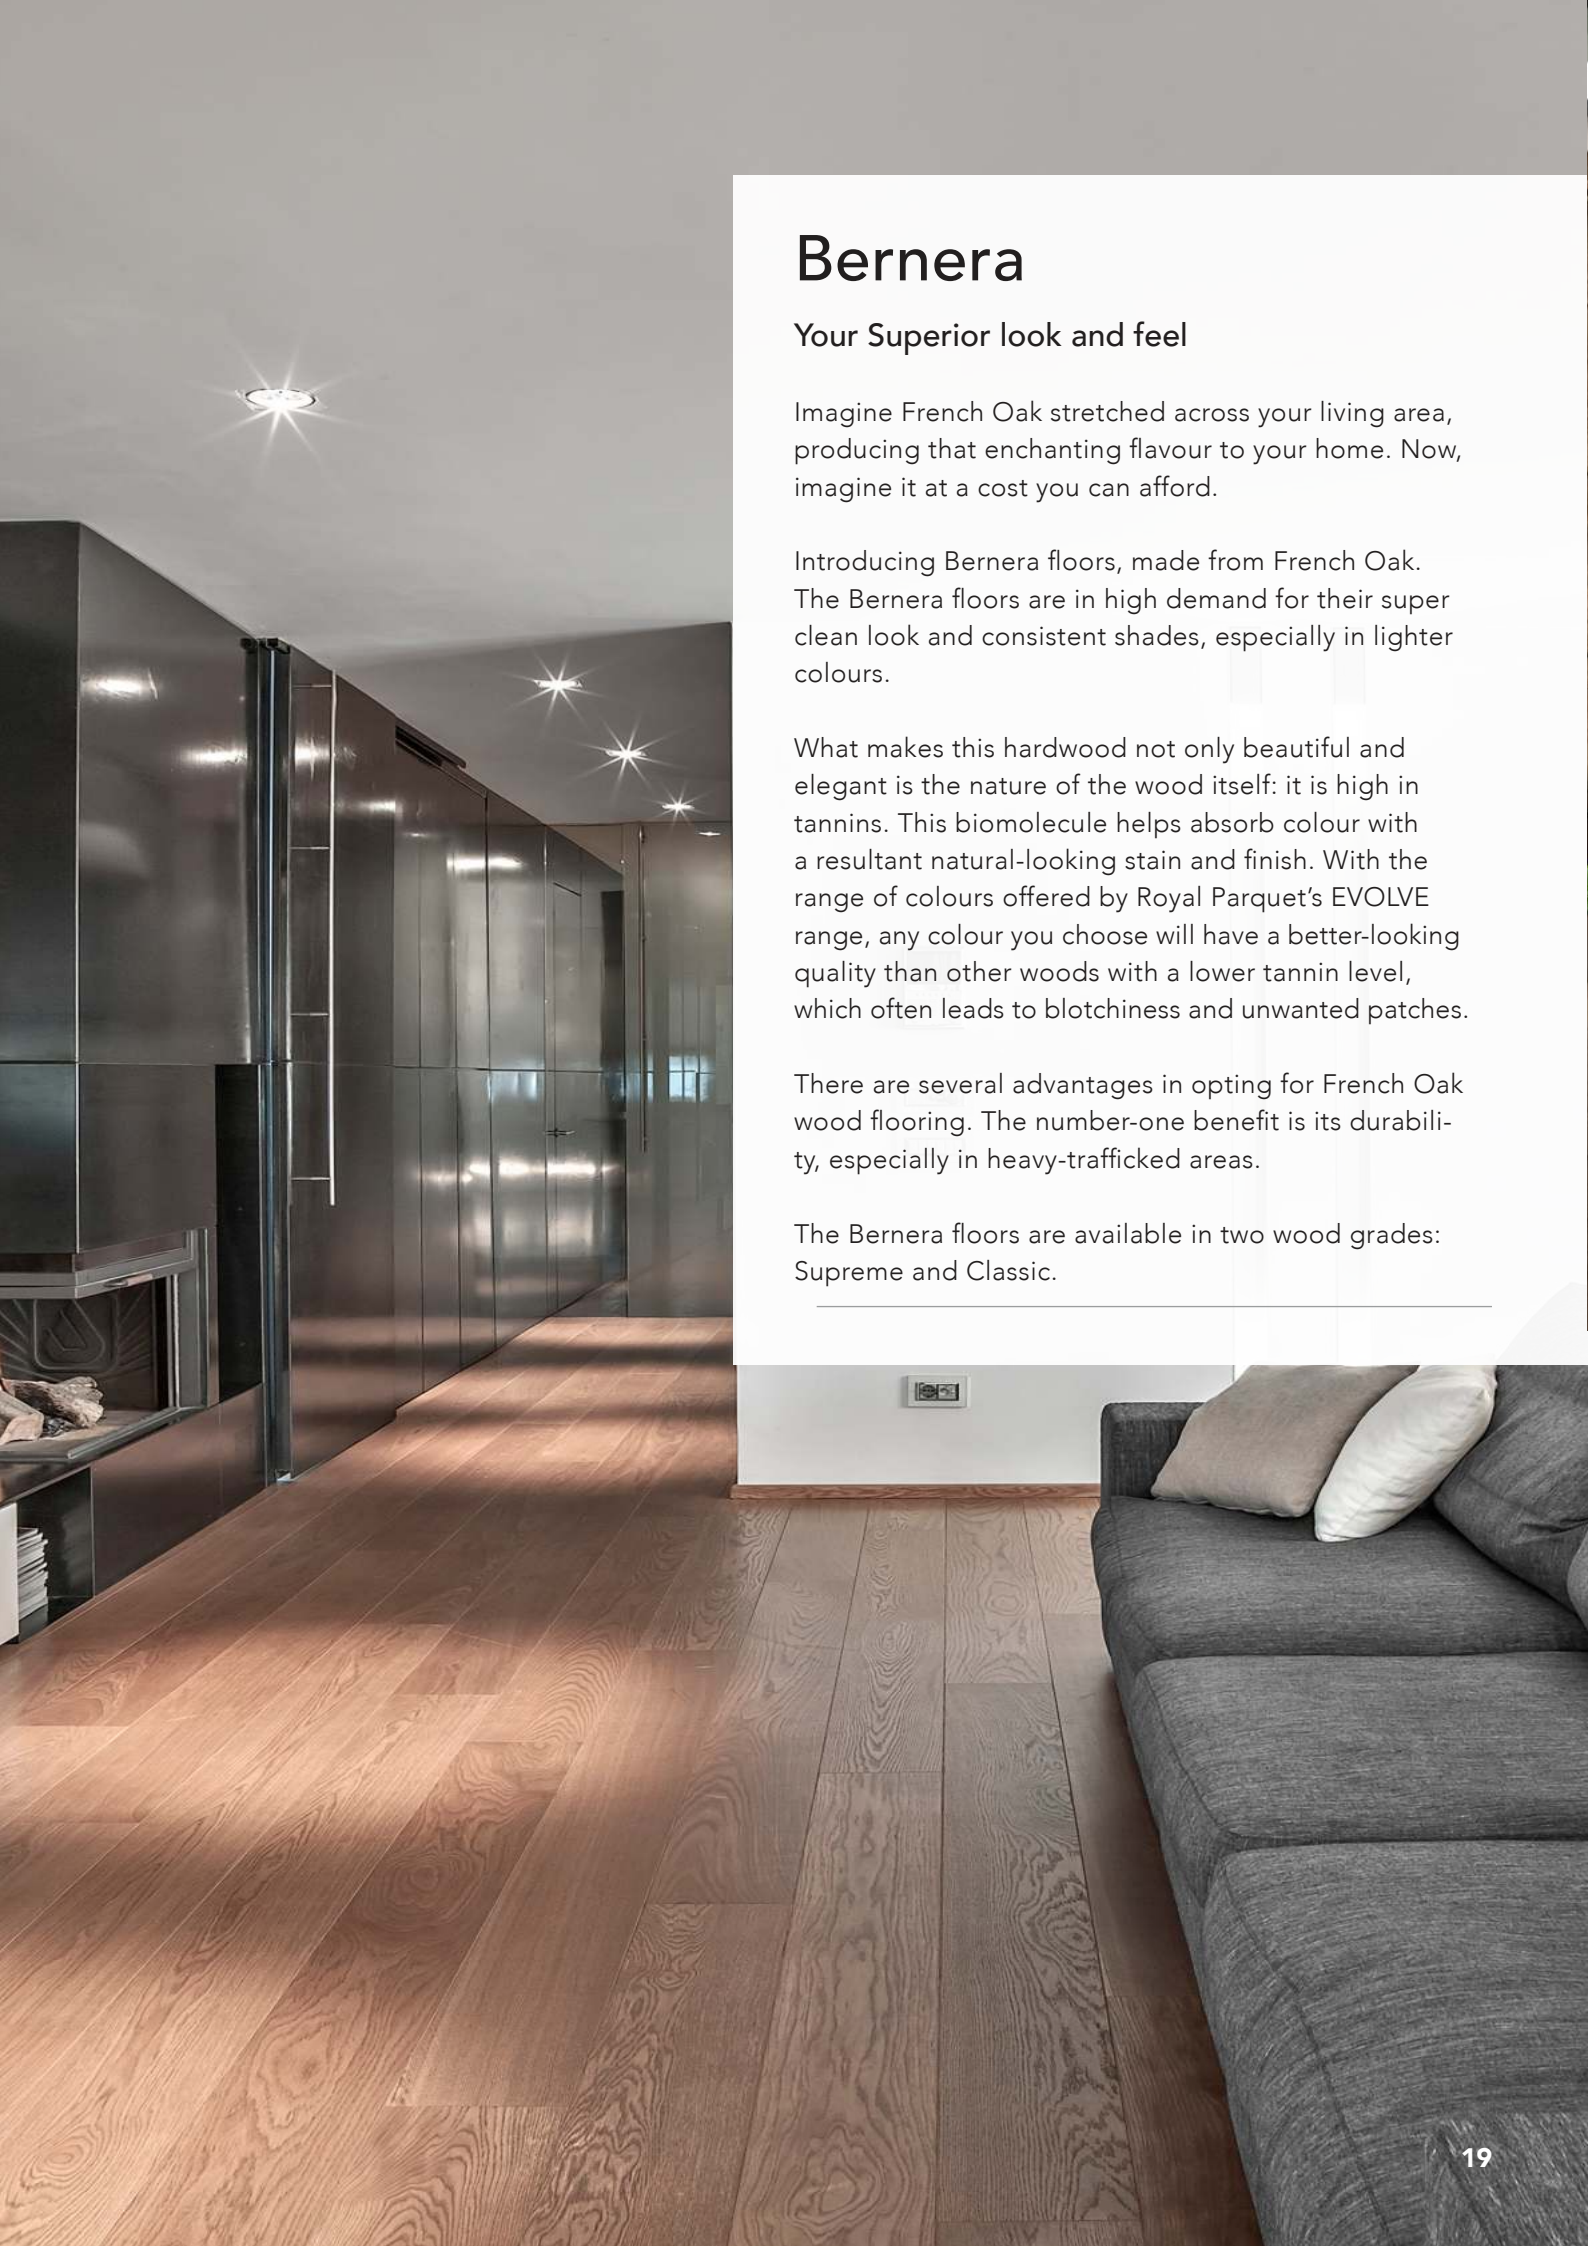


Top Coat
The top coat is a lacquer, applied in either matt or gloss finish.

Top Layer
The veneer is made from solid hardwood 0.6mm thick, using a beautiful and durable American Oak.

Core
The core is constructed from high quality SPC (Stone Plastic Composite) which adds strength, stability and a resistance to water.

Construction:	3 Layer Constructions
Dimension	127mm x 635mm x 5 mm - Herringbone 190 mm x 1220 mm x 5 mm - Plank
Top Layer	0.6mm
Bavel	4-sided micro bevel
Grade	Supreme
Resandable	N/A
Joint System	Click
Waterproof	Yes
Installation Method	Floating
Application	Commercial and Residential



Bernera

Your Superior look and feel

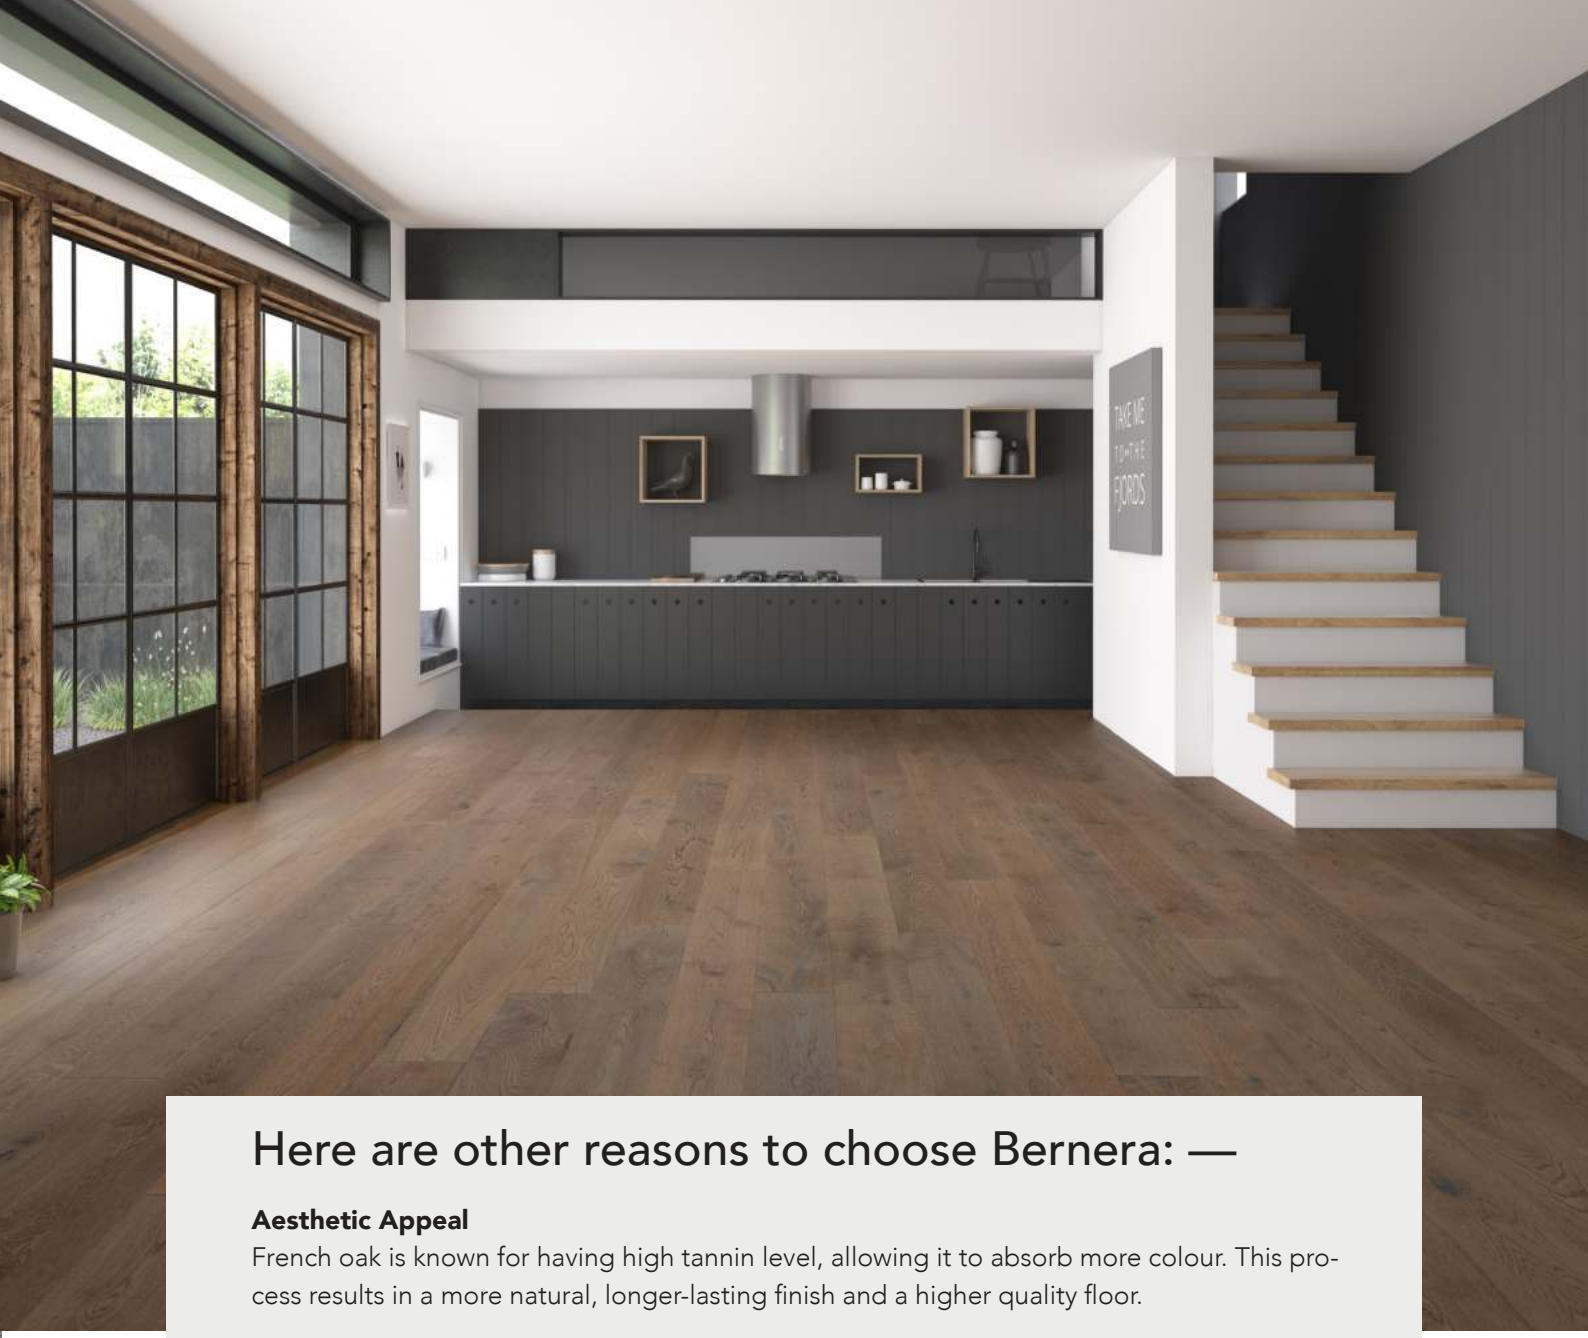
Imagine French Oak stretched across your living area, producing that enchanting flavour to your home. Now, imagine it at a cost you can afford.

Introducing Bernera floors, made from French Oak. The Bernera floors are in high demand for their super clean look and consistent shades, especially in lighter colours.

What makes this hardwood not only beautiful and elegant is the nature of the wood itself: it is high in tannins. This biomolecule helps absorb colour with a resultant natural-looking stain and finish. With the range of colours offered by Royal Parquet's EVOLVE range, any colour you choose will have a better-looking quality than other woods with a lower tannin level, which often leads to blotchiness and unwanted patches.

There are several advantages in opting for French Oak wood flooring. The number-one benefit is its durability, especially in heavy-trafficked areas.

The Bernera floors are available in two wood grades: Supreme and Classic.



Here are other reasons to choose Bernera: —

Aesthetic Appeal
French oak is known for having high tannin level, allowing it to absorb more colour. This process results in a more natural, longer-lasting finish and a higher quality floor.

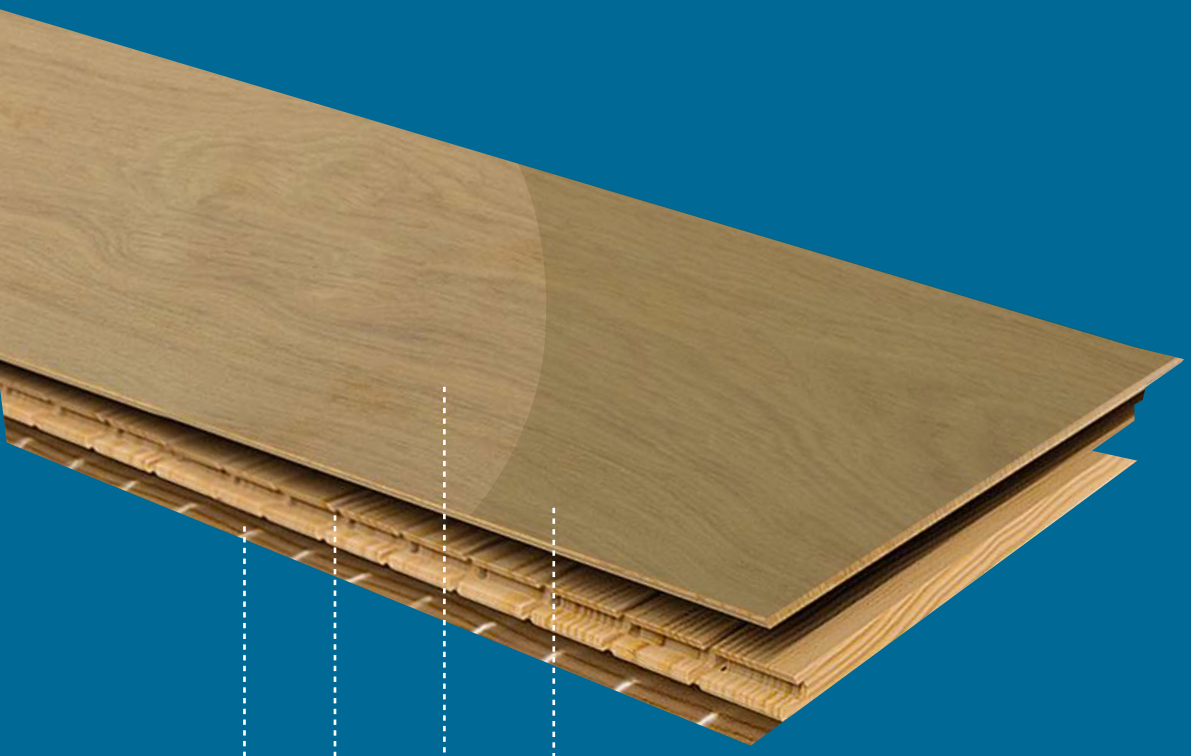
Environmentally Friendly
The sawmills of France produce a lot of the worlds oak timber. An ever-increasing percentage of this oak comes from sustainable managed forests that rotate on a 200 year life cycle. Oak is hard to surpass as an ethical and sustainable material.

Cost-effective
Cost-effectiveness is one of the most significant benefits that you get when using French oak flooring. Even though it naturally has a higher price, you should also consider the longevity of French oak flooring. The increased durability is a factor that should be not be ignored. A long-term perspective would show that this kind of flooring is a better investment.

Durability
The ability to resist harsh external pressure is a benefit that is crucial for hardwood flooring. Oak wood is highly durable and has been known to last throughout the lifetime of a home.

You can choose the wood grade to satisfy your specific requirements. This product is offered in both the Supreme and Classic wood grades. — Only the finest grade of wood makes it to our EVOLVE collection, offering clean-grade hardwood flooring with that natural and genuine wood-look and feel.

THE CONSTRUCTION OF BERNERA



Top Coat
The top coat is a lacquer, applied in either matt or gloss finish.

Top Layer
The veneer is made from solid hardwood up to 3mm thick, using a beautiful and durable species such as French Oak.

Middle Layer
The core is constructed from multiple layers of softwood such as Spruce and Pine. This adds strength and stability to the floor.

Bottom Layer
The base layer is fixed at 90deg to the core, this is also made from softwood and gives extra stability along the full length plank.

Construction:	4 Layer Constructions
Dimension	190mm x 1830mm x 14 mm
Top Layer	3 mm
Grade	Classic - ABC Grade French Oak
	Supreme - AB Grade French Oak
Bavel	4-sided micro bevel
Resandable	2 times
Joint System	5G Loc
Installation Method	Floating or Glue Down
Waterproof	No
Application	Commercial and Residential

Technical Overview

Installation System

Click System
Click system floors fit together using a click and lock system. They can be installed as a floating floor on top of existing floors without damage.

Glue Down
Glue-down floors are required in certian applications to control exessive expansion over large areas.

Construction of Engineered Wood

Multi Layer Parquet
Multilayer parquet consists of layers of wood joined at an angle of 90 degrees. The top layer of the parquet is made of oak hardwood veneer, the middle and bottom layers are made from softwood.

3 Layer Parquet
3 layer parquet is constructed with a top layer of hardwood oak veneer, a middle layer of high quality HDF and bottom layer made of sowftwood.

Top Layer Thickness

0.6 mm | 1.2 mm | 3 mm

The hardwood layer is either 0.6mm, 1.2mm or 3mm depending on the range selected.

HIGH DURABILITY Bona FINISHES

Bona Finishes, The world's leading floor laquer manufacturer.

WARRANTIES

25 YEARS RESIDENTIAL WARRANTY

Your Royal Parquet floor comes with a comprehensive life-time product warranty of 25 years, provided that the flooring has been installed and maintained as per our guidelines. The warranty covers the structural integrity of the flooring: the planks will not crack, warp or delaminate through normal usage, and the lacquered finish will not be worn through to the veneered surface for the duration of the warranty period.

10 YEARS COMMERCIAL WARRANTY

For commercial applications, your Royal Parquet comes with a standard 10-year warranty, provided that the flooring has been installed and maintained as per our guidelines. The warranty covers the structural integrity of the flooring: the planks will not crack, warp or delaminate through normal usage, and the lacquered finish will not be worn through to the veneered surface for the duration warranty period. As commercial applications can vary greatly, please request specific warranty details from your Royal Parquet dealer on a project-by-project basis before placing your order.

Floors Protected By

Bona®

Passion for wood floors

100 YEARS OF EXPERIENCE

We only use Bona industrial coatings on our floors – a world- leading brand from Sweden. With 100 years of experience in the market, Bona manufactures innovative, sustainable, UV-based coatings that enhance the qualities of the raw materials used, while providing durable surface protection.

We invest in these premium finishes so we can offer you flooring products that stand apart from the rest in terms of quality, beauty, durability and ease of maintenance. Our coatings are perfect for both commercial and residential use. They are independently tested for abrasion, adhesion, impact, scratch resistance and other characteristics, in line with multiple European and U.S. standards.

Wilhelm Edner, the founder. Bona continues being a family-owned company today.

GREENGUARD

The GREENGUARD Environmental Institute is an industry-independent organization, aiming to reduce people's exposure to pollutants and to improve indoor air quality. They certify products that meet stringent chemical emissions requirements. We are proud to declare all Bona® SuperCourt® Waterborne Finishes, SuperCourt Cleaners and Commercial System™ Cleaner as GREENGUARD-certified.
